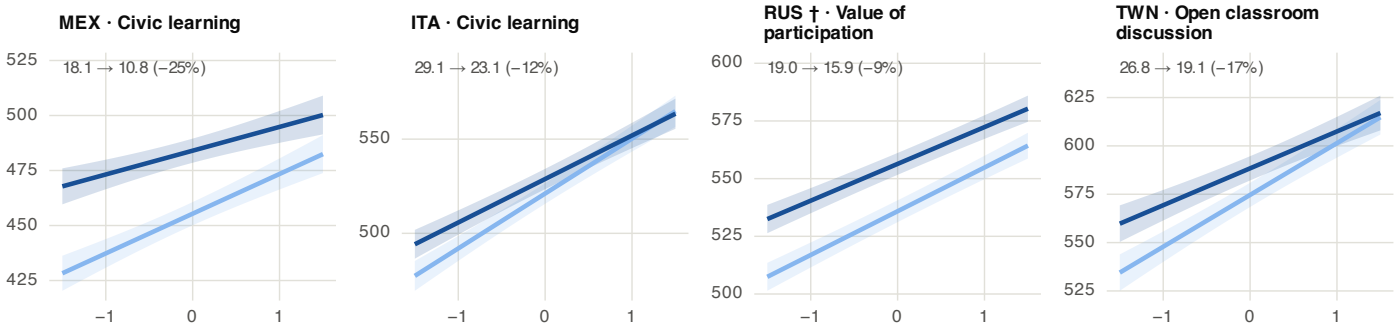

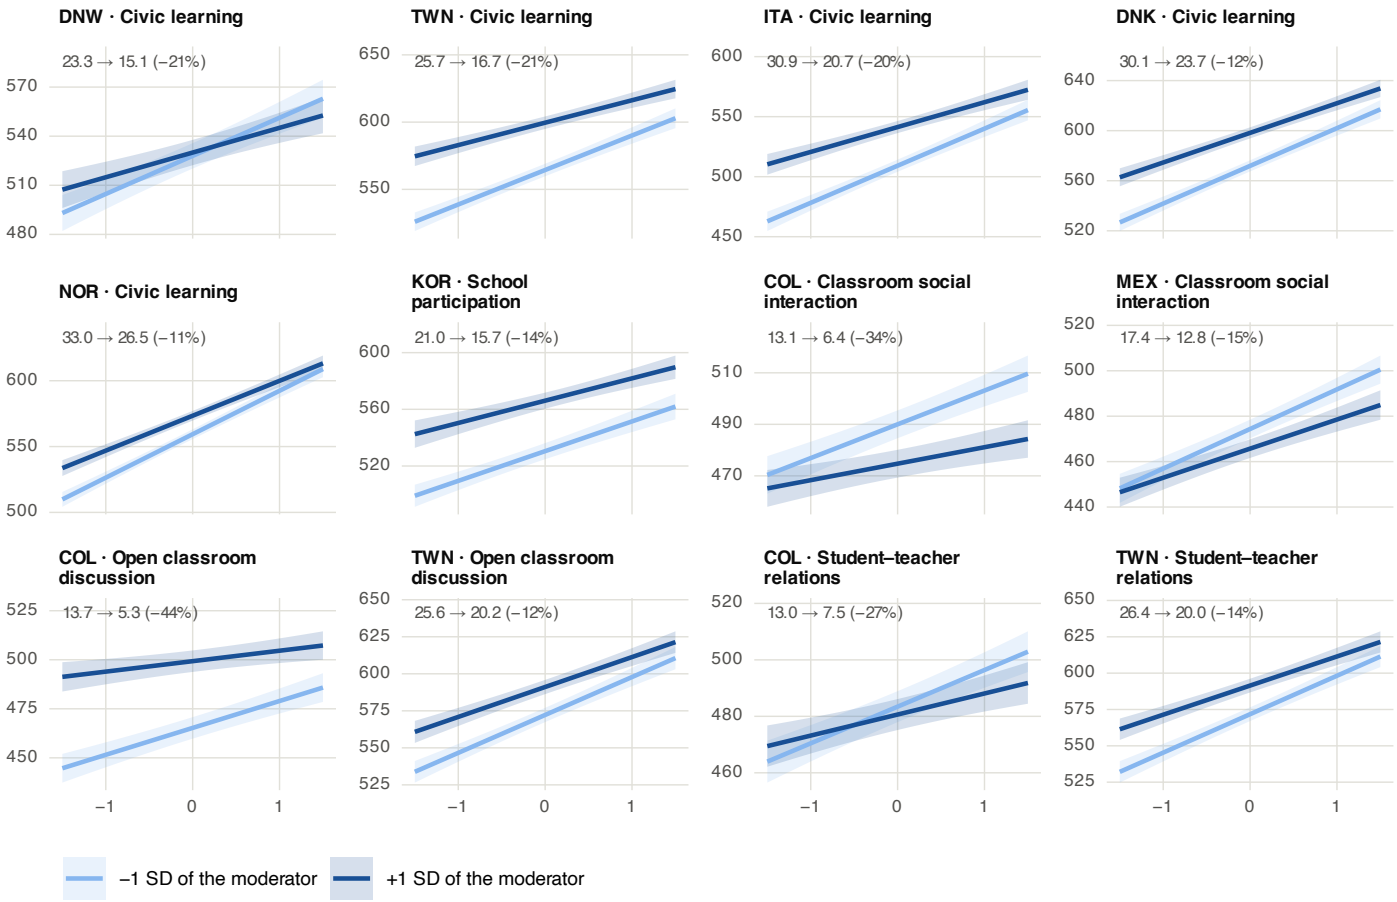

Figure 3. The within-school SES gap where mitigation is observed

Interactions with $p < .05$ and a negative coefficient (4 of 189 in M3; 12 of 168 in M4)
X axis: student SES relative to the school mean. Y axis: predicted civic knowledge (free scale per panel).

A. Aggregate moderator (M3): schools at –1 and +1 SD of the school mean

B. Perceived moderator (M4): students at –1 and +1 SD relative to their school

Predicted lines for an average school in the system (other covariates at their mean), with 95% CI.
Label: SES slope at –1 SD → +1 SD of the moderator (change relative to the model slope). † Singular fit. Unadjusted p; unweighted; first plausible value. Hong Kong is omitted (M3, student–teacher relations): its within-school SES slope is ≈ 0.
